

This illustration is created in such way that changing the overall color composition is **really fast** and **easy**. For those a bit unfamiliar with Adobe Illustrator, I've created this simple, step-by-step instructions, so you get the most out this particular file.

to change color:

- 1 open the vector .eps file in **Adobe Illustrator**
- 2 make sure your **Color** and **Gradient** palettes are visible
Window > Color, > Gradient
- 3 select the illustration with **Selection Tool** (v), all elements are grouped and share same gradient
- 4 click on the color in the gradient you want to change
- 5 change the color in color pallet until you reach desired effect.
