## **1. Overview**

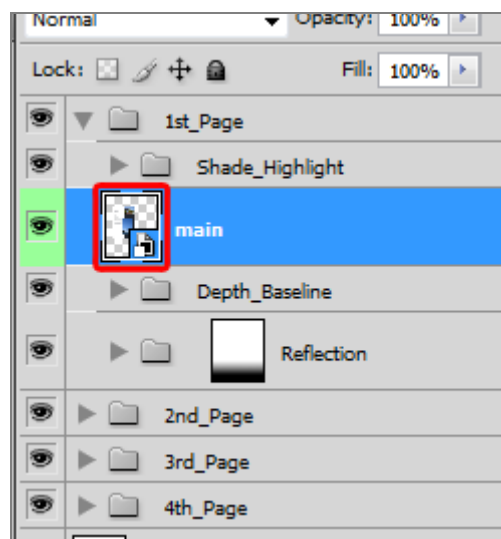

First of all, thanks for purchasing the SMART PHOTOREALISTIC MOCKUP SET 3. You've just bought a set of elegant visual elements that will enhance your project to make it further visually appealing. The mockup set allows you to seamlessly place your images/design layout/screenshots into a photo-realistic magazine mockup.

The variation provided reflects the front view of an upright positioned magazine. Please check my portfolio for other variations. The mock-up provided is very easy to use and customize alike. Everything is automatically processed and added to your image. The sections that follow will walk you through the implementation and customization of the mock up to your preferences.

## 2. Placing your image.

It is really easy to place your images into the mock-ups provided. The files make use of the smart objects that is easier and faster to use than traditional actions. The following sections will explain the process.

- i) Open *mockup5.psd* provided with the pack.
- ii) Open the layers palette (window>layers). Once open, you'll see that the layers have been grouped into the corresponding page numbers.
- iii) When expanded, these layers group have one green colored layer each which are the smart object layers where you will place your images.
- iv) Simply double click the layer thumbnail (of the purple layers) as shown in the figure below. If a dialogue box appears, simply click OK and continue.

- v) This takes you to a temporary file with the content for the image.
  - vi) Once in the file, paste your content or simply place your image from the File>Place.
  - vii) Once pasted, save and close the file and the change is reflected immediately in the main file.
  - viii) That's it, repeat the same for other layers that are green colored.
- There are a total of 4 layers that has smart objects; i.e., you can place upto 4 different images in the book. Of course you can change as many times as you like!
